

Review: Linear Inequalities and Absolute value inequalities

Linear Inequalities

Quiz

Solve. Graph the solution on a number line.

average

20/22 :)

$$11x + 3 - 7x + 4 \geq 6$$

$$4x \geq -1$$

$$x \geq -\frac{1}{4}$$

$$0 + 3 - 0 + 4 \geq 6$$
$$7 \geq 6 \checkmark$$

Solve. Graph the solution on a number line.

$$3 - 2(x - 4) > -1$$

$$3 - 2x + 8 > -1$$

$$-2x > -12$$

$$x < 6$$

Solve. Graph the solution on a number line.

$$3(6x - 1) \leq 18 - 3x$$

Absolute Value Inequalities

Solve. Graph the solution on a number line.

$$|x| \leq 5$$

$$|x - 0| \leq 5$$

$$-5 \leq x \leq 5 \leftarrow x \geq -5 \text{ and } x \leq 5$$

All numbers that have a distance from zero of 5 or less.

Solve. Graph the solution on a number line.

$$|x+3| > 7$$

or

$$x+3 > 7 \text{ or } x+3 < -7$$
$$x > 4 \text{ or } x < -10$$

Solve. Graph the solution on a number line.

$$|x+5|-6 < -5$$

$$x+5 < 1 \quad \text{and} \quad x+5 > -1$$
$$x < -4 \quad \quad \quad x > -6$$

Solve. Graph the solution on a number line.

$$9|1 + 8x| - 3 \geq 78$$
