

## 2.5 Part 2

### **Empirical Rule 68%–95%–99.7%**

**If a data set has a bell shaped distribution then...**

- ✓ **About 68% of all values fall within 1 standard deviation of the mean**
- ✓ **About 95% of all values fall within 2 standard deviations of the mean**
- ✓ **About 99.7% of all values fall within 3 standard deviations of the mean**

# The Empirical Rule

p.84

$\bar{x}$ : mean  
 $s$ : st. dev.

ONLY TRUE FOR BELL SHAPED DISTRIBUTIONS

The mean speed of vehicles along a stretch of highway is 56 mph with a standard deviation of 4 mph. About what percent of the vehicles will be between a speed of

68-95-99.7

$$\bar{x} = 56$$

$$s = 4$$

a) 44 mph and 68 mph

99.7%

b) 48 mph and 64 mph

95%

c) 44 mph and 60 mph

83.85%

The mean height of women in the U.S. is 64 inches with a standard deviation of 2.75 inches. Estimate the percent of the women whose heights are between:

- a) 58.5 inches and 69.5 inches      b) 61.25 inches and 72.25 inches
- c) 55.75 inches and 66.75 inches      d) more than 55.75 inches

The mean height of women in the U.S. is 64 inches with a standard deviation of 2.75 inches. Estimate the percent of the women whose heights are between:

a) 58.5 inches and 69.5 inches

95%

b) 61.25 inches and 72.25 inches

83.85%

c) 55.75 inches and 66.75 inches

83.85%

$100 - 15 = 85\%$   
d) more than 55.75 inches
